

Poles and posts can supply power to remote areas when there is no space in the floor for a floor box. There are two discrete options for service poles - either give the option of floor to ceiling service pole or floor to desk service post.

Aluminium Profile - ref 3160

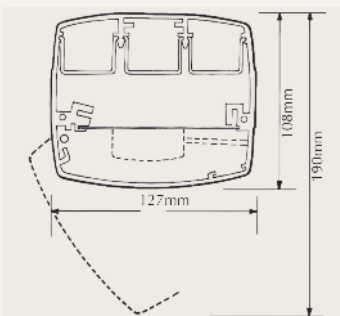

- A single sided pole manufactured from extruded aluminium, giving it the benefit of smooth lines
- Floor to ceiling pole can be made to any ceiling height., and can be fed from an underfloor cabling system or through the ceiling void
- Posts can be made to any height to suit modern office layouts
- 3 segregated compartments allow any range of power, data or AV module to be used
- Available options:

Hinged lid with cable outlets to hide plugs and trailing cables

Any height up to 3600mm

Any length of fixed or opening lid, usually supplied in 600mm modules

Finish supplied to any RAL number or as anodised aluminium

Steel profile

- A bespoke pole or post that is manufactured from steel and can be made to any requirements.
- Poles are supplied with base and ceiling fixing plates and can be fed from a floor system or from the ceiling void
- Posts are supplied with base fixings
- Available options:

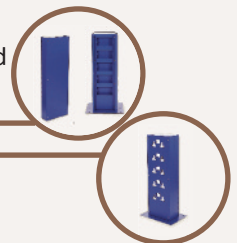

Any height

Any profile width, depth or number of compartments

Finish supplied to any RAL number or in stainless steel

Single or double sided

With or without lid
